                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Total number of hits satisfying chosen parameters:
                                                            ဂ ဂ
    Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

and is derived by analysis of the total score distribution.
                       Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          seq length: 0

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

CC producing a protein in a host-cell, by infecting or transforming a host cell capable of expressing a chelon coding sequence with a vector CC comprising a protein in a host-cell, by infecting or transforming a host cell capable of expressing a chelon coding sequence with a vector CC creyion for the protein to produce a recombinant host cell and culturing CC The nucleic acid encoding the chelon protein is useful for binding CC divalent mercuric ions, to take up, sequester and concentrate the heavy CC irrigation water of waste streams. The DNA of the invention, when CC inmobilised onto a solid support, is useful for concentrating heavy metal cons from contaminated soil, ground water, hydroponic solutions or constantiant environment waste streams or contaminated concentrating heavy metal considerabilised onto a solid support, is useful for concentrating heavy metal considerabilised onto a solid support, is useful for concentrating heavy metal considerabilised onto a solid support, is useful for concentrating heavy metal concentration and concentration and concentration are also useful in water treatment resins. The molecules of the invention are also useful in water treatment resins. The nucleic acid of the invention is highly specific and binds divalent cation such as mercury or cadmium with high affinity. The present amino concentration contaminated concentration of the heavy metal binding proteins of the invention.

Note: ABK52207 encodes only amino acids 1-107 of this protein.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 cc which binds mercuric ions. The invention is useful for recombinant of expressing a chelon coding sequence with a vector cell capable of expressing a chelon coding sequence with a vector comprising a promoter active in the host cell operably linked to a coding cregion for the protein to produce a recombinant host cell and culturing client recombinant host cell under conditions, where DNA is expressed.

CC The nucleic acid encoding the chelon protein is useful for binding coding creatal ions from contaminated soil, ground water, hydroponic solutions or irrigation water of waste streams. The DNA of the invention, when criminated environment waste streams or concentrate the heavy considered from contaminated environment waste streams or concentrating heavy metal constrongent of the invention and celimination of mercuric ion from gastrointestinal tracts of animals or elimination of mercuric ion from gastrointestinal tracts of animals or chumans exposed to toxic metal ions such as mercury and/or cadmium. The nucleic acid of the invention are also useful in water treatment resins. The nucleic acid of the invention is highly specific and binds divalent cation such as mercury or cadmium with high affinity. The present amino confinition cadmium/mercury ion binding chelon proteins of the invention. This sequence is one of the heavy metal binding proteins termed chelons.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Qγ

CC The nucleic acid encoding the chelon protein is useful for binding

CC divalent mercuric ions, to take up, sequester and concentrate the heavy

CC metal ions from contaminated soil, ground water, hydroponic solutions or

CC immobilised onto a solid support, is useful for concentrating heavy metal

CC ions from contaminated environment waste streams or contaminated

CC aqueous medium including biological fluids. The nucleic acid, when

CC recombinantly expressed in enteric bacteria (which are nontoxigenic and

CC nonpathogenic), is suitable for use in the in vivo sequestration and

CC elimination of mercuric ion from gastrointestinal tracts of animals or

CC humans exposed to toxic metal ions such as mercury and/or cadmium. The

CC molecules of the invention are also useful in water treatment resins.

CC The nucleic acid of the invention is highly specific and binds divalent

CC cation such as mercury or cadmium with high affinity. The present amino

CC acid sequence represents one of a collection (AAU97550 AU97560) of

CC This sequence is one of the heavy metal binding proteins termed chelons

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           producing a protein in a host-cell, by infecting or transforming a host cell capable of expressing a chelon coding sequence with a vector comprising a promoter active in the host cell operably linked to a coding region for the protein to produce a recombinant host cell and culturing the recombinant host cell under conditions, where DNA is expressed.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention relates to a new non-naturally occurring recombinant DNA molecule comprising a sequence encoding a chelon protein which binds mercuric ions. The invention is useful for recombinantly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Claim 4; Page 22; 42pp; English.

ions from contaminated environment waste streams or contaminated aqueous medium including biological fluids. The nucleic acid, when recombinantly expressed in enteric bacteria (which are nontoxigenic and nonpathogenic), is suitable for use in the in vivo sequestration and elimination of mercuric ion from gastrointestinal tracts of animals or humans exposed to toxic metal ions such as mercury and/or cadmium. The molecules of the invention are also useful in water treatment resins. The nucleic acid of the invention is highly specific and binds divalent cation such as mercury or cadmium with high affinity. The present amino acid sequence represents one of a collection (AMU97553-AMU97560) of synthetic cadmium/mercury ion binding chelon proteins of the invention. This sequence is one of the heavy metal binding proteins termed chelons of the invention.
Sequence
                                                                                                                                                                                                                                                                                                                                                        The nucleic acid encoding the chelon protein is useful for binding divalent mercuric ions, to take up, sequester and concentrate the heavy metal ions from contaminated soil, ground water, hydroponic solutions or irrigation water of waste streams. The DNA of the invention, when immobilised onto a solid support, is useful for concentrating heavy metal tons from contaminated outliness the stream of the invention of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                            cell capable of expressing a chelon coding sequence with a vector comprising a promoter active in the host cell operably linked to a coding region for the protein to produce a recombinant host cell and culturing the recombinant host cell under conditions, where DNA is expressed.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Novel non-naturally occurring recombinant DNA molecule encoding a chelon protein useful for binding divalent cation mercury from contaminated soil, water, aqueous medium including biological fluids
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         irrigation water; waste stream; contaminated aqueous medium;

                                                                                                           Ş
                                                                                                                                                                                                                                                                                                                       CC recombinant DNA molecule comprising a sequence encoding a chelon protein comprising a sequence encoding a chelon protein combinant binds mercuric ions. The invention is useful for recombinantly countries of expressing a chelon coding sequence with a vector cell capable of expressing a chelon coding sequence with a vector comprising a promoter active in the host cell operably linked to a coding region for the protein to produce a recombinant host cell under conditions, where DNA is expressed. CC The nucleic acid encoding the chelon protein is useful for binding cometal ions from contaminated soil, ground water, hydroponic solutions or irrigation water of waste streams. The DNA of the invention, when claim from contaminated environment waste streams or contaminated environment waste streams or contaminated contaminated environment environmen

                                                                                     Comprising a protein in elaces to a new non-naturally occurring combinant DNA molecule comprising a sequence encoding a chelon protein components are the protein in a host-cell, by infecting or transforming a host cell capable of expressing a chelon coding sequence with a vector comprising a protein to produce a recombinant host cell under conditions, where DNA is expressed. CC The nucleic acid encoding the chelon protein is useful for binding contaminated soil, ground water, hydroponic solutions or irrigation water of waste streams. The DNA of the invention, when capably advantaged in enteric bacteria (which are nontoxigenic and concentrating the combinant host cell under conditions, where DNA is expressed. CC immobilised onto a solid support, is useful for concentrating heavy metal ions from contaminated environment waste streams or contaminated consumment in enteric bacteria (which are nontoxigenic and compathogenic), is suitable for use in the in vivo sequestration and compathogenic), is suitable for use in the in vivo sequestration and compathogenic), is suitable for use in the in vivo sequestration and compathogenic), is suitable for use in the in vivo sequestration and compathogenic), is suitable for use in the in vivo sequestration and compathogenic), is suitable for use in the in vivo sequestration and compathogenic), is suitable for use in the in vivo sequestration and compathogenic), is suitable for use in the in vivo sequestration and compathogenic), is suitable for use in the in vivo sequestration and compathogenic acid of the invention are also useful in water treatment resins.

CC This sequence represents one of a collection (AAU97553-AAU97560) of synthetic cadmium/mercury ion binding chelon proteins of the invention.

CC synthetic cadmium/mercury ion binding chelon proteins of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           irrigation water; waste stream; contaminated aqueous medium; biological fluid; gastrointestinal tract; chelon protein; enteric bacteria; toxic metal ion; mercury; cadmium; divalen
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Synthetic cadmium/mercury ion binding chelon protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            AAU97558;

conviction to the intercept comprising a sequence encoding a chelon protein consisting a protein in a host-cell, by infecting or transforming a host cell capable of expressing a chelon coding sequence with a vector cell capable of expressing a chelon coding sequence with a vector comprising a promoter active in the host cell operably linked to a coding the recombinant host cell under conditions, where DNA is expressed. Cregion for the protein to produce a recombinant host cell and culturing created in the chelon protein is useful for binding created ions from contaminated soil, ground water and concentrate the heavy created ions from contaminated soil, ground water, hydroponic solutions or immobilised onto a solid support, is useful for concentrating heavy metal constrainment waste streams or contaminated creations from contaminated environment waste streams or contaminated crecombinantly expressed in enteric bacteria (which are nontoxigenic and conpathogenic), is suitable for use in the in vivo sequestration and crecombinantly expressed in enteric bacteria (which are nontoxigenic and conpathogenic), is suitable for use in the invivo sequestration and chimans exposed to toxic metal ions such as mercury and/or cadmium. The nucleus of the invention are also useful in water treatment resins. The nucleus acid of the invention are also useful in water treatment resins. The nucleus acid of the invention are also useful in specific and binds divalent cation such as mercury or cadmium with high affinity. The present amino acid sequence represents one of a collection (AAU97553-AAU97560) of synthetic cadmium/mercury ion binding chelon proteins of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  а
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        밁

CC producing a protein in a host-cell, by infecting or transforming a host cell capable of expressing a chelon coding sequence with a vector cc comprising a promoter active in the host cell operably linked to a coding region for the protein to produce a recombinant host cell and culturing the recombinant host cell under conditions, where DNA is expressed.

CC The nucleic acid encoding the chelon protein is useful for binding cc divalent mercuric ions, to take up, sequester and concentrate the heavy metal ions from contaminated soil, ground water, hydroponic solutions or cirrigation water of waste streams. The DNA of the invention, when cc inmobilised onto a solid support, is useful for concentrating heavy metal ions from contaminated environment waste streams or contaminated colding biological fluids. The nucleic acid, when crecombinantly expressed in enteric bacteria (which are nontoxigenic and nonpathogenic), is suitable for use in the in vivo sequestration and compathogenic), is suitable for use in the in vivo sequestration and compathogenic).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            RESULT 8

The molecules of the invention are also useful in water treatment resins. The nucleic acid of the invention is highly specific and binds divalent cation such as mercury or cadmium with high affinity. The present amino acid sequence represents one of a collection (AA097553-AA097560) of synthetic cadmium/mercury ion binding chelon proteins of the invention. This sequence is one of the heavy metal binding proteins termed chelons
The present invention relates to a new non-naturally occurring recombinant DNA molecule comprising a sequence encoding a chelon protein which binds mercuric ions. The invention is useful for recombinantly producing a protein in a host-cell, by infecting or transforming a host cell capable of expressing a chelon coding sequence with a vector comprising a promoter active in the host cell operably linked to a coding region for the protein to produce a recombinant host cell and culturing the recombinant host cell under conditions, where DNA is expressed. The nucleic acid encoding the chelon protein is useful for binding divalent mercuric ions, to take up, sequester and concentrate the heavy metal ions from contaminated soil, ground water, hydroponic solutions or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   of the invention.

ions from contaminated environment waste streams or contaminated aqueous medium including biological fluids. The nucleic acid, when recombinantly expressed in enteric bacteria (which are nontoxigenic and nonpathogenic), is suitable for use in the in vivo sequestration and elimination of mercuric ion from gastrointestinal tracts of animals or humans exposed to toxic metal ions such as mercury and/or cadmium. The molecules of the invention are also useful in water treatment resins. The nucleic acid of the invention is highly specific and binds divalent cation such as mercury or cadmium with high affinity. The present amino acid sequence represents one of a collection (AAU97563) of synthetic cadmium/mercury ion binding chelon proteins of the invention. This sequence is one of the heavy metal binding proteins termed chelons of the invention.
                                                                 of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                              irrigation water of waste streams. The DNA of the invention, when immobilised onto a solid support, is useful for concentrating heavy metal

Novel non-naturally occurring recombinant DNA molecule encoding a chelon protein useful for binding divalent cation mercury from contaminated soil, water, aqueous medium including biological fluids

Disclosure; Page 20; 42pp; English

The present invention relates to a new non-naturally occurring which binds DNA molecule comprising a sequence encoding a chelon protein mercuric ions. The invention is useful for recombinantly

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ρy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        CC producing a protein in a host-cell, by infecting or transforming a host cell capable of expressing a chelon coding sequence with a vector comprising a promoter active in the host cell operably linked to a coding region for the protein to produce a recombinant host cell and culturing the recombinant host cell under conditions, where DNA is expressed. CC The nucleic acid encoding the chelon protein is useful for binding CC divalent mercuric ions, to take up, sequester and concentrate the heavy CC irrigation water of waste streams. The DNA of the invention, when CM importance on the invention of the invention or contaminated environment waste streams or contaminated considered in a solid support. Is useful for concentrating heavy metal aqueous medium including biological fluids. The nucleic acid, when creombinantly expressed in enteric bacteria (which are nontoxigenic and celmination of mercuric ion from gastrointestinal tracts of animals or humans exposed to toxic metal ions such as mercury and/or cadmium. The molecules of the invention are also useful in water treatment resins. CC The nucleic acid of the invention is highly specific and binds divalent caid sequence represents the Shigella flexneri wild-type MerR protein of theinvention of heavy metal binding proteins termed chelons.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match
